Professional Summary

BCA graduate with hands-on AWS and Linux experience across 5 independently deployed projects. Completed industrial training at Nayara Energy. AWS Cloud Practitioner Essentials and AWS Technical Essentials certified. Seeking a Junior Sysadmin or Cloud Support role.

Technical Skills

Cloud (AWS): EC2, S3, IAM, CloudWatch, SNS, VPC, Security Groups, Load Balancer, Auto Scaling, AWS CLI

Linux & Automation: Linux, Bash, Git, Cron Jobs, systemd, SSH, UFW, firewalld, iptables, Nginx

Networking: TCP/IP, DNS, HTTP/HTTPS, VPN, Ports & Protocols, Network Troubleshooting

DevOps & CI/CD: GitHub, Bash Scripting, Infrastructure Automation, IAM Provisioning

Monitoring & Security: CloudWatch Alarms, SNS Alerts, Log Analysis, Server Hardening, Compliance Auditing

CLI Tools: grep, awk, sed, df, ss, journalctl, find

Projects

AWS EC2 Web Deployment

- Provisioned and configured EC2 instance on Amazon Linux 2023 with Security Groups enforcing least-privilege access — SSH locked to a single IP, HTTP/HTTPS open globally
- Deployed Nginx as a systemd service and wrote a Bash health-check script that verifies the full stack end-to-end, confirming HTTP 200 OK response; demonstrated full infrastructure deployment lifecycle on AWS

Linux Server Hardening Audit Tool

- Built a Bash security audit script for Linux servers checking SSH misconfigs, open ports, firewall rules (UFW/firewalld), failed login attempts via journalctl, disk usage, and world-writable files
- Outputs color-coded PASS/WARN/FAIL results with a score out of 100; detected a real brute-force attack during live testing and scored 77/100 on hardened Amazon Linux 2023 EC2 instance

EC2 Cost Optimization Automation

- Automated detection and Cron-scheduled shutdown of idle EC2 instances using AWS CLI and Bash, preventing unnecessary cloud spend on underutilized infrastructure
- Used CloudWatch CPU utilization metrics to identify under-utilized instances; implemented automation workflows reducing manual overhead across multiple instances

Cloud Monitoring & Alerting System

- Built CloudWatch and SNS pipeline monitoring EC2 CPU, memory, and disk metrics against configurable thresholds; fires real-time email and SMS alerts on breach
- Automated the full monitoring cycle using Cron and log-processing tools — zero manual checking required; includes IAM policy configuration for SNS topic access

Cloud Backup Management System

- Automated EC2 volume snapshots and S3 sync using Bash and Cron with configurable retention policies; backups are compressed, timestamped, and upload-verified
- Implemented auto-deletion of old backups to control storage costs; includes restore workflows covering full lifecycle management of cloud backup infrastructure

Internship

Industrial Trainee – Nayara Energy

Jan 2026 – Feb 2026

- Completed industrial training on PSSR Portal systems in a large-scale petroleum refinery IT environment — first exposure to enterprise-scale infrastructure and IT workflows
- Gained practical experience in production IT operations, troubleshooting, access control management, and observing how IT teams maintain large-scale systems

Certification

AWS Cloud Practitioner Essentials ·
AWS Technical Essentials ·

Amazon Web Services
Amazon Web Services

Education

Bachelor of Computer Applications (BCA)

2023 – 2026

S.V.E.T College, Jamnagar · Saurashtra University, Rajkot
