PROFESSIONAL SUMMARY

BCA graduate with hands-on experience in AWS cloud infrastructure and Linux system administration across 5 independently deployed projects covering EC2 deployment, security hardening, cost automation, monitoring, and backup management. Completed industrial training at Nayara Energy in a large-scale refinery IT environment. Seeking a Junior Sysadmin or Cloud Support role where I can contribute from day one.

TECHNICAL SKILLS

Cloud (AWS): EC2, S3, IAM, CloudWatch, SNS, VPC, Security Groups, AWS CLI

Linux & Automation: Linux, Bash, Git, Cron Jobs, systemd, SSH, UFW / iptables, Nginx

Networking: TCP/IP, DNS, HTTP/HTTPS, VPN, Ports & Protocols, Troubleshooting

CLI Tools: grep, awk, sed, df, Log Analysis

INTERNSHIP

Industrial Trainee – Nayara Energy *Jan 2026 – Feb 2026*

- Completed industrial training on PSSR Portal systems in a large-scale refinery IT environment
- Gained hands-on exposure to real-world IT operations and applied troubleshooting skills in a production setting

PROJECTS

AWS EC2 Web Deployment

- Deployed a live web server on AWS: configured EC2 instance, Security Groups (SSH locked to single IP, HTTP/HTTPS open globally), and Nginx on Amazon Linux 2023 as a systemd service
- Wrote a Bash health-check script verifying the full deployment stack end-to-end; confirmed HTTP 200 OK response

Linux Server Hardening Audit Tool

- Built a Bash script auditing Linux servers for SSH misconfigs, open ports, firewall rules, failed logins, disk usage, and world-writable files
- Outputs color-coded PASS/WARN/FAIL results with a security score out of 100; tested on Ubuntu 22.04 and 24.04

EC2 Cost Optimization Automation

- Automated detection and Cron-scheduled shutdown of idle EC2 instances using AWS CLI and Bash, reducing unnecessary cloud spend
- Leveraged CloudWatch CPU metrics to identify under-utilized resources and implemented multi-instance automation workflows

Cloud Monitoring & Alerting System

- Built a CloudWatch and SNS pipeline tracking EC2 CPU, memory, and disk metrics against configurable thresholds
- Fires real-time email and SMS alerts on threshold breach; automated continuous monitoring using Cron and log-processing tools

Cloud Backup Management System

- Automated EC2 volume snapshots and S3 sync using Bash and Cron with configurable retention policies
- Implemented compressed timestamped backups with upload verification, restore workflows, and auto-deletion of old backups to control costs
