Professional Summary

BCA graduate with hands-on experience building AWS cloud infrastructure — covering Terraform, Python, boto3, VPC Networking, CI/CD pipelines, Containerisation, RDS, and Linux security hardening. Completed industrial training at Nayara Energy. Completed AWS Cloud Practitioner Essentials training and AWS Technical Essentials training. Seeking a Junior DevOps Engineer or Cloud Support role.

Technical Skills

Cloud (AWS): EC2, S3, IAM, RDS, VPC, ALB, Auto Scaling, CloudWatch, SNS, SSM Session Manager, AWS CLI

Containers & CI/CD: Docker, GitHub Actions, YAML

Linux & Automation: Linux Administration, Bash, Git, Nginx, firewalld, SSH hardening

Networking: VPC, subnets, route tables, security group chaining

Monitoring & Security: CloudWatch alarms, SNS alerts, server hardening, IAM least privilege

Infrastructure as Code: Terraform, boto3, Python

Projects

Cloud Automation Suite

- Provisioned multi-environment AWS infrastructure (VPC, subnets, IGW, EC2) using Terraform with isolated dev/prod workspaces; configured GitHub Actions CI/CD pipeline to automatically run terraform plan for both environments on every push — credentials stored as GitHub Secrets
- Built Python + boto3 monitoring tool that retrieves live EC2 instance data (ID, state, IP, environment tag); containerized with Docker for portable execution via environment-variable-injected AWS credentials

Custom VPC Architecture

- Built a production-grade VPC from scratch in AWS: custom CIDR (10.0.0.0/16), public and private subnets across two Availability Zones, Internet Gateway, and separate route tables enforcing public/private isolation
- Deployed RDS MySQL (db.t3.micro) in private subnet with security group chaining — port 3306 accessible only from EC2 security group, not the internet; connected and queried database from EC2 via MySQL client

CI/CD Pipeline with GitHub Actions

- Built an automated deployment pipeline using GitHub Actions that triggers on every push to main branch and deploys portfolio files to AWS S3
- Stored AWS credentials as GitHub Secrets (never hardcoded); created dedicated IAM user with least-privilege S3-only permissions; debugged YAML syntax errors and secret name mismatches on first run

Linux Server Hardening Audit Tool

- Built a Bash security audit script for Linux servers checking SSH misconfigs, open ports, firewall rules (UFW/firewalld), failed login attempts via journalctl, disk usage, and world-writable files
- Outputs color-coded PASS/WARN/FAIL results with a score out of 100; detected a real brute-force attack during live testing and scored 77/100 on hardened Amazon Linux 2023 EC2 instance

Cloud Monitoring & Alerting System

- Built CloudWatch and SNS pipeline monitoring EC2 CPU, memory, and disk metrics against configurable thresholds; fires real-time email and SMS alerts on breach
- Automated the full monitoring cycle using Cron and log-processing tools — zero manual checking required; includes IAM policy configuration for SNS topic access

Internship

Industrial Trainee – Nayara Energy

Jan 2026 – Feb 2026

- Completed industrial training on PSSR Portal systems in a large-scale petroleum refinery IT environment gaining exposure to enterprise IT operations and workflows.

Certification

AWS Cloud Practitioner Essentials Training, AWS Technical Essentials Course

Amazon Web Services

Education

Bachelor of Computer Applications (BCA)

2023 – 2026

S.V.E.T College, Jamnagar · Saurashtra University, Rajkot
